

Why Projects Fail...and How to Prevent It

Length: 1 Day

Course Features Did you know that your current project has only a 34% chance of succeeding? How much money and how many resources will you be wasting if this happens to you? Don't sit back and wait for something bad to happen on your project—now is the time to be proactive and prevent failure!

In addition to reviewing the most common reasons for project failure globally, attendees will be offered the opportunity to address their own experiences with failure or near-failure. Attendees will also be required to use their project management knowledge in class, to outline plans for preventing project failure in specific areas and to craft contingency plans for dealing with project failure if it should occur.

COURSE CONTENT

- Defining Project Failure: What Does it Really Mean?
- Project Management in the Real World: Exploring Why Projects Fail
- Root Causes: Determining the real Problem
- Preventing Failure: What Can Project Managers Do?
